

Eliminate complicated Web Site Navigation!

Send your target audience EXACTLY where you want them to go... immediately!

A web key is a great inexpensive USB device that immediately opens up a specific web page (regardless of how buried the page is in the website) when plugged into a computer. They are to computers what QR codes are to smartphones! While web keys look very much like a USB flash drive, they have no memory to store data but rather are programmed with specific url information. If you are looking to drive traffic to your website...

the Web Key is the answer!

Consider them for:

- New Product launches/updates
- Trade Show Giveaways/Contests
- Online Store customer loyalty incentives
- Online presentations
- Online Company Training and Annual reports
- Online Personnel Handbooks
- Real Estate Listings
